Storage Elements

SURGICAL - CABINET FOR SUTURING EQUIPMENT

Variant 1

Variant 2

This cabinet is used to store suturing equipment in the operating theatre. The cabinet is integrated in a partition of the Surgical system. The door consists of an aluminium frame with aluminium hinges. There is a push opening mechanism at the door. The cabinet can be equipped with lighting for better orientation. The door of the cabinet is fitted with safety glass. By default, the cabinet is supplied with a RAL hue corresponding to the central module designed as per the contract specifications. The cabinet may also be made of AISI 304 with FIN8 surface finish. The shelves of the cabinet are made glass, with spacing upon the customer's requirements. The cabinet is standardly supplied with 4 shelves. With the Surgical system, the cabinet for suturing equipment represents one of the basic elements to construct operating theatres with maximum safety, sterility, hygiene, easy maintenance and sanitation.

Its design makes it suitable especially for hospital environments.
