SURGICAL - CABINET FOR MONITOR AND COMPUTER

The monitor cabinet, as part of the Surgical system, is one of the fundamental elements for constructing operating theatres with maximum safety, sterility, hygiene, and ease of maintenance and sanitation. Its design makes it particularly suitable for hospital environments.

The cabinet for a monitor/computer is used to install all-in-one monitors/computers in the operating theatre. It is designed for all common types of monitors or all-in-one computers for operating theatres. The cabinet is integrated into the Surgical system partition. The tilting part of the cabinet is made of sheet metal and is equipped with aluminum hinges and glass. As standard, the cabinet is supplied in an RAL shade according to the central module designed for the specific order. The cabinet can also be supplied in an AISI 304 version.
